torino

New design possibilities for your space.
Nesting and contract table, accessories
Design: Wolfgang C. R. Mezger

torino: The refined table system with a multiplicity of options.
torino offers countless options for many different applications. This innovative table system is particularly suited for an office environment and modern work methods. The numerous possible combinations, optional media integration and plethora of additional elements make torino highly flexible and convenient to use. What makes it so versatile is something typical for our products – the business-like design.
Design: Wolfgang C. R. Mezger

– Clean lines

– Multifunctional

– Versatile

– Easy to handle

– Particularly stable

– Expandable

– Options: factory installed multimedia integration system

Areas of application

office

Team work, even on an impulse: highly flexible nesting and contract tables with a lot of possibilities in configuration. Furthermore, optional with MIS and numerous well designed accessories.

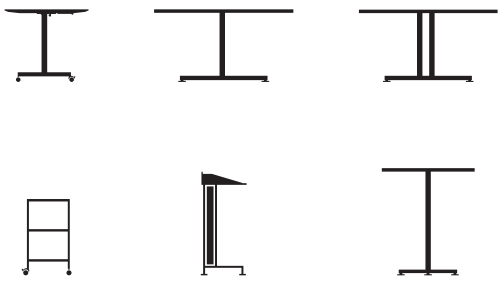
universal

torino is a fit for any situation – thanks to the broadest range of table top shapes and sizes (sizes up to 260 cm x 120 cm are available) and different frame designs, including height adjustable versions. Extremely space-saving and adaptable: the nesting table.

cafeteria

Flexible and stable even in the canteen, with a standing table or column table with a classic cross-shaped stand.

Models



torino creates more free space – including in the meeting area: Nesting and contract tables permit a variety of configurations – spontaneously and flexibly. The many shapes and sizes available create a variety of possibilities. The ease of handling ensures that all of the options will be used. Whenever needed and depending on the number of people.

One design characteristic of the range: the high-quality foot with a stable bearing surface – not only a visual benefit but also highly effective in terms of stability.

Highly multifunctional – also due to the clean-lined design.

torino works outstandingly in combinations due to its clearly defined, simplified form: the different shapes of table tops and the chromed steel tube frame ensure that the product family is a fit in many situations. Another special feature that distinguishes torino from other tables is that this line requires only one table leg for two tops. Fully in line with the simplified design – with increased leg room an added plus.

Best combinations: two table tops with just one leg or – as here – using quarter segment top inserts.

A snap to clear away – with an ingenious mechanism.

The torino nesting table, with an ingeniously simple and stable mechanism: folding the table top is an extremely intuitive process. torino folds to such a slender size that many tables can be stowed in an extremely narrow space, even with the optional modesty panel. Furthermore, this can be done by a single person since torino can be folded up and moved with one hand.

Simplicity that puts everything at the fingertips: the torino nesting table can be folded up and moved with one hand.

Fitted with four lockable casters, with options for hard or soft surfaces.

Different frame options to match the different table top sizes and shapes.

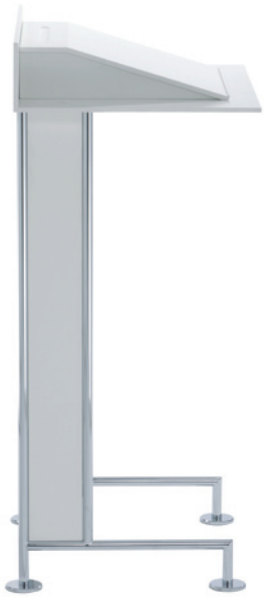
Large or small meeting circles – torino is a fit for a wide variety of conditions. The shape and size of the table tops can thus fit perfectly into a given space. Extra large: even extremely large table tops are possible with torino, with dimensions of up to 260 x 120 cm. These tops sit securely on frames with two columns.

Depending on the function, the additional elements are fitted with casters or gliders.

Even more flexible – with well designed accessories.

torino's extras are tried and tested in the meeting area and at events. For example, the torino serving cart can be used to house a monitor, projector or printer. The lectern has a removable document holder. Furthermore, the torino side cart can be used as tidy storage for drinks, snacks and work materials, as well as for handing them around.

The lectern is shown here with the optional multimedia integration system.

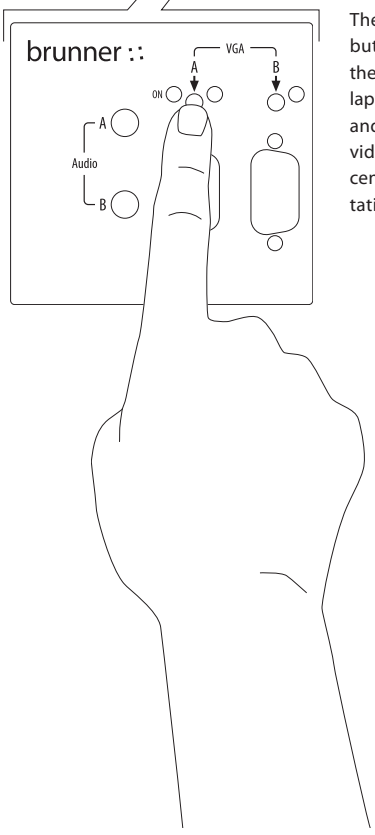


For sitting or standing: The torino column end tables can be smoothly height adjusted, permitting them to fit into a variety of conversational settings.

ARTUS
GRUPPE
SAMSUNG
DELL

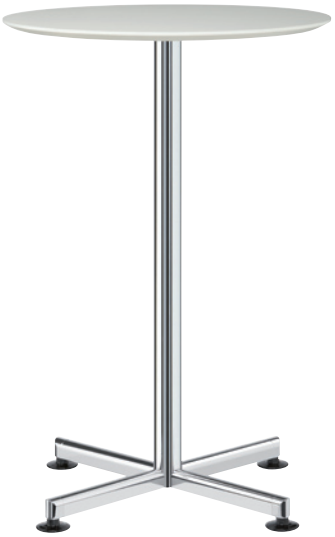
torino can optionally come with the multimedia integration system (abbreviated to MIS). This system, developed in-house, makes presentations and teamwork extremely simple: each participant can connect her/his laptop directly to a media module on the table and thus to the central presentation medium; this connection can be activated at the push of a button. No further equipment or skills required – completely maintenance free. Just plug and play.

Each table is fitted with a media module with power and video connections for two users. Network and USB integration are also optional.



The show-me button activates the corresponding laptop connection and directs the video signal to the central presentation medium.

torino is a pleasing solution not only in business settings, but also in the cantine, with its increased demands. In this environment, the column table comes into use: An extremely easy-going feel but with the expected stability. A classic cross-shaped foot ensures optimal leg room and the table top is available in a variety of designs. Choice of HPL, beech veneer or oak veneer.



The torino standing table is also available as a nesting table for frequent changes of setting.

Notes

See the current pricelist for details, prices and terms of business. Technical changes, errors and colour variations excepted. Some of the models depicted are special, premium-cost designs. Wood is a natural product. For our furniture ranges, we use only high-quality beech from sustainable forestry sources. Despite the woods being carefully selected, there may be variations in colour. Variations in colour and pattern are not grounds for product returns but rather an expression of the unique character of wooden furniture.
